

A Successful Craigslist Advertising Method

This strategy is being used to effectively obtain many leads from the very popular Craigslist.org, without having your ads removed. Attempts to place multiple ads at the same time on Craigslist will generally fail without using some sophisticated method or software. Craigslist tracks IP addresses when ads are placed to eliminate people violating the rules.

- 1) Create an account at Craigslist.org
- 2) Place an ad in a major city in the biz opportunity section.
- 3) Let it stay for 48 hours. Then remove the ad.
- 4) Place the ad again, in another city or same city, so that you can get a top ranking. You can use any of the sample ads we have.

*Thanks to Rhonda S. of Oregon for this strategy.
